## Discontinued options & components | CURRENT PRODUCTS

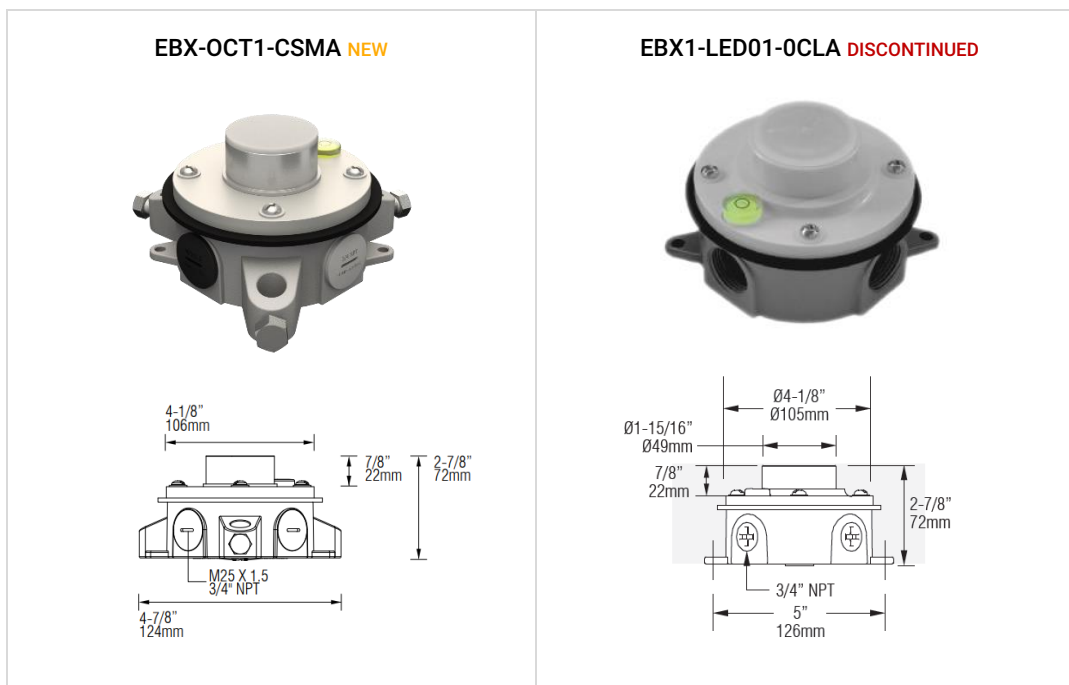

### AC Input Voltage Option

In all technical sheets and materials, input voltage option “A” will represent 12 Volts instead of only indicating 12 V AC as before. Please contact factory for details of each model.

### In-grade back boxes: Design and order code change

The new back box design adds 3 legs with holes for rebars allowing easier installation at the job sites. Leg screws are only included for order of boxes with mounting kits MK2 and MK3, and will not be included in order of fixtures and back boxes only.

Box diameter (without legs) and height remain the same.

The back boxes (with different order code) will continue to be selected by factory unless otherwise requested (for installations in coastal environment or harsh weather conditions).
