

## HIGH-QUALITY LED INTEGRATION

- No heat
- No UV emissions
- Even illumination
- No impact on wine quality
- Safe in refrigerated environments

MP Lighting's wine rack system is designed to highlight and showcase *without* compromising the central element of your display – the quality of the wine on exhibit.

LED INTEGRATED

# WINE RACK SYSTEM

PREMIUM QUALITY | HIGHLY CUSTOMIZABLE | TIMELESS DESIGN

## FEATURES

### Flexible configurations

- Specifiable spacing between columns
- Specifiable spacing between rows
- 2 Finish options: Black and Bronze
- 6 bottle holder options

### Even bottle illumination

Enabled by 1W LED light integrated in each arm

### High quality materials & components

- Close-to-zero heat & no UV emitted from LEDs
- Materials to withstand refrigerated storages

### Time-saving installation

The sleek modular wine rack system L182 is designed to complement your space and add the perfect amount of lighting to your wine display. The L182 fixture allows you to create a beautiful lighting over bottles of wine without emitting any UV light and barely any heat.

We recommend adding the wine rack in a kitchen, wine cellar, cabinets and walls. Its' highly customizable nature can be both space-efficient or a stand out piece. You can mount this product on walls or have it free standing from ceiling to floor.

## FAQ

### 1. How can the display be mounted?

The L182 is meant for wall mounted applications and the L183 is meant for floor to ceiling mount applications.

### 2. How tall can the display be?

The L182 can be up to 8 feet tall and the L183 can be up to 12 feet tall.

### 3. What colors are available?

The L182 comes in black or bronze finish and the L183 only comes in black.

### 4. What is the suggested spacing between arms?

Our suggested spacing is 9" inches to 12" inches apart, but the arms can be as close together or as far apart as you would like. A wine rack can have up to 12 arms with a light on each vertical column. This may help you determine the number of arms for your project.

### 5. What is the closest on center spacing that columns can be placed?

Closest on center spacing: 1B and 2B arms is 14" inches apart. 1A and 2A we have drawn them 7" inches apart. (that almost seems too close together!).

### 6. Can I use different arm types on one support rail?

Yes! You can use different arms on one column.

### 7. What are the accessories? Why would I use a full shroud or half shield accessory?

The accessories are meant to reduce glare. They are included with every arm that has an LED light. Typically, we supply the HS (half shroud) for wall mounted wine racks, and we supply the FS (full shroud) for floor & ceiling mounted wine racks. There are, however, exceptions. If the wine rack is wall mounted and there are mirrors on the wall, then you might want a full shroud to avoid an uncomfortable light glare.

### 8. Can I place this in a refrigerated display/enclosure?

The integrated LEDs can be covered by the MP Lighting special coating, which protects the LEDs from environmental impacts such as water damage, high salt content damage, and more. For this special coating, please consult our factory for more information.

### 9. Does the display have any impact on the wine quality?

No as there are no UV rays and next to no heat, which is a top concern when storing wine.
